Summary

I build products from the first screen to the API, database and launch. Recent work includes AiKi, a marketplace for AI agents, and Trimmy, a stock-market learning game. My strongest languages are TypeScript and Dart; I also work with Python and Rust.

Technical skills

Flutter, Dart, React Native, Expo, TypeScript, React, Next.js, Node.js, Fastify, PostgreSQL, Supabase, Python, Rust, Solana, MCP.

Selected work

AiKi — Aug to Sep 2026
Built a marketplace for hiring AI agents, from Next.js screens to APIs, storage and an MCP server. Each job has a budget, rules and a receipt. Authored 288 of 291 commits.

Trimmy — Aug to Oct 2026
Founded a stock-market learning game. Built the Flutter app, web app, Fastify API and PostgreSQL database, plus the design and launch films. Practice trading and real money have distinct colours throughout.

Plinth — Jun to Jul 2026
Co-founded a subscription-billing product for Nigerian businesses. Built the brand, website and dashboard. Ubadineke Prince built the billing engine. Authored 47 of 80 commits.

Hack4FUTO 5.0 — Feb to Jul 2026
Convened FUTO's student hackathon with 600+ attendees. Raised sponsorship, including a $5,000 Superteam Nigeria grant. Built the website, live voting and public treasury with a Claude MCP connector.

Dartus — 2025 to 2026
Created and maintain a Dart and Flutter SDK for Walrus file storage. Funded by a Walrus Foundation grant and featured on its blog. Reviewed and merged outside contributions.
